civilavi@malawi.net**AIC for Malawi****AIC****A 3/2007****Effective from 14 APR 2007****Published on 14 APR 2007****AFI GPS MONITORING UNIT (GMU) HEIGHT MONITORING SERVICE****1 NOTICE**

This AIC is only available in PDF. Please click the PDF link in the commands pane.

The AFI RVSM Monitoring Agency (ARMA) has contracted the GPS Monitoring Unit (GMU) Height Monitoring Services of ARINC, who have a proven record in this field, for the provision of professional Height Monitoring Services within the AFI Region.

The results of Height Monitoring test missions have been processed, evaluated and accepted by the ARMA. The AFI GMU Height Monitoring service is now available for operational use of those aircraft requiring height monitoring within Africa. The results of height monitoring received from Regional Monitoring Agency (RMA) in other regions, for AFI aircraft, will also be utilised.

AFI has access to the three GMUs which will be utilised for Height Monitoring in AFI and all carry certificate papers European Aviation Safety Agency (EASA) form 1, for operation on board aircraft either on the flight deck or within the cabin. It should be called that GMU Height Monitoring has been operational in other regions for some time and is thus a safe and tested method of gathering Height Monitoring Data. Further to this, ARMA will issue to relevant authorities, on request, a set of the certification papers for reference purposes. Requests should be made to ARMA/ARINC for these copies either electronically or via fax if required.

Operators requiring Height Monitoring should use the following points of contacts in order to obtain information, secure the service and plan the event:

- i. Preferably direct contact with ARINC on email address: afirvsm@arinc.com
- ii. If unsure of the process, make contact with the ARMA on email address: afirma@atns.co.za
- iii. The Operational Base in Johannesburg will serve as the planning base for the event. The Operator will be provided with contact details for the Johannesburg Operational Base when appropriate.

Note 1: No Height Monitoring results will be released from the Operational Base, as they will only have raw unprocessed data, which will need to be processed at the Gatwick OCC. This raw data is of no use to the operator until processed.

Note 2: Operators are requested to refrain from contacting ARINC directly for the outcome of the Height Monitoring flight as ARINC may not release this information. Note 3: All Height Monitoring results will be forwarded to the ARMA by ARINC and released officially to applicable operator by the ARMA.

This Circular is issued for information, guidance and necessary action.
